STUDIO PERANCANGAN ARSITEKTUR 2

MURinsel

The Island in the Mur
Plaza For The New Millennium

The idea of integrating the river Mur into the life of the city came up right at the beginning of the planning phase for the Cultural Capital, as the river not only divides the city, but also connects it. The artist undertakes a quest for a new, exceptional building site. Based on the idea of Graz-born Robert Punkenhofer (Art & Idea) **the artist implanted an "artificial joint" linking nature and city,** which forces visitors to adopt new perspectives and guides them along grounds which have hitherto been inaccessible. In other words - Vito Acconci, the artist and designer from New York who dedicated himself increasingly to architecture in the past few years, placed an island in the Mur. Acconci would not be Acconci had he simply put a floating platform into the river between the historic city centre and Mariahilferplatz, created a simple look-out at an unusual location. Instead the island is an organically twisted construction composed of various merging shells. Each part, no matter whether closed or open, has been assigned certain functions depending on its specific spatial character. **Now the island features a small café, an open-air theatre and a playground for children** - a small isolated cell of urban culture at a place that has never been part of the city and now emerges as a small centre of urban life.

Cafe "Insel" designed by Acconci Studio and purpur

The shell contains an open-air theatre. Underneath the dome, one finds a café, run by the traditional Graz bakery Sorger, and designed by Acconci Studio and the Graz-based architecture studio purpur. A fantastic landscape for children has been created in the small area where these two forms intersect. **"We wanted to design a place that is divided into two specific zones, and these zones should gradually merge"**, explained the American architect and artist. "If people sit in the theatre, they see the playground in the back; if they sit in the café, they are protected by the playground forming part of the café's roof. These different functions should not be separated radically: around the island flows water, and we wanted to construct an object that is also **flowing and changeable.**"

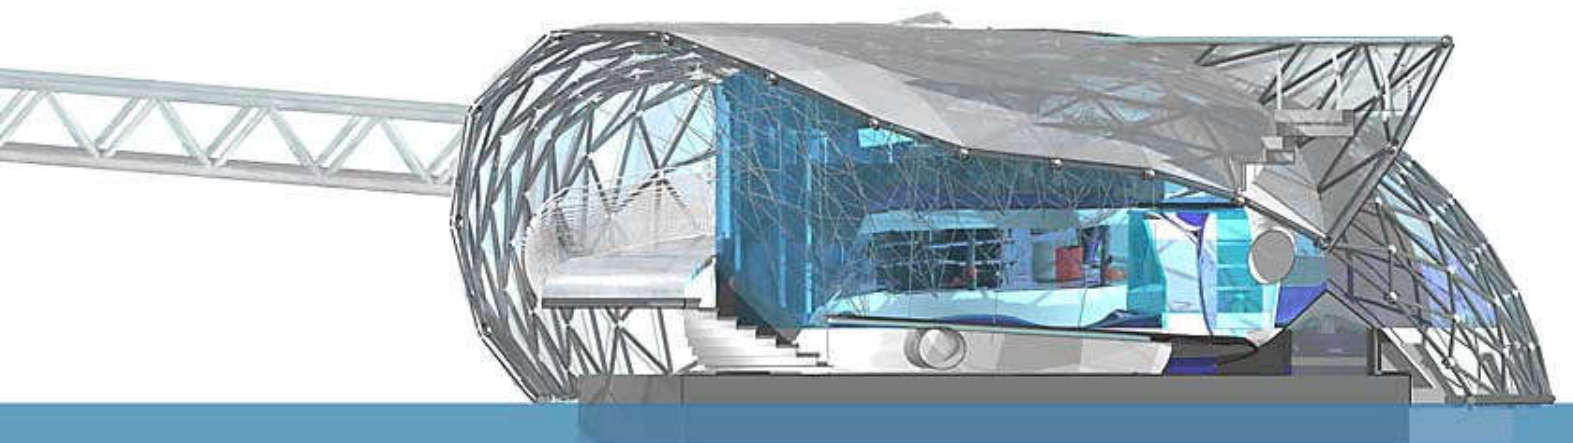

What makes the island so exciting is not only its combination of interior/exterior but also the new perspectives it provides of the city. Familiar objects in Graz can be seen from a new point of view. Acconci plays with building materials in order to guarantee the best possible effect. The hilly landscape around Graz is reflected in the stainless steel, and through peepholes, Nirosta steel lattices and glass windows the surroundings can even be seen from deep within the artificial island.

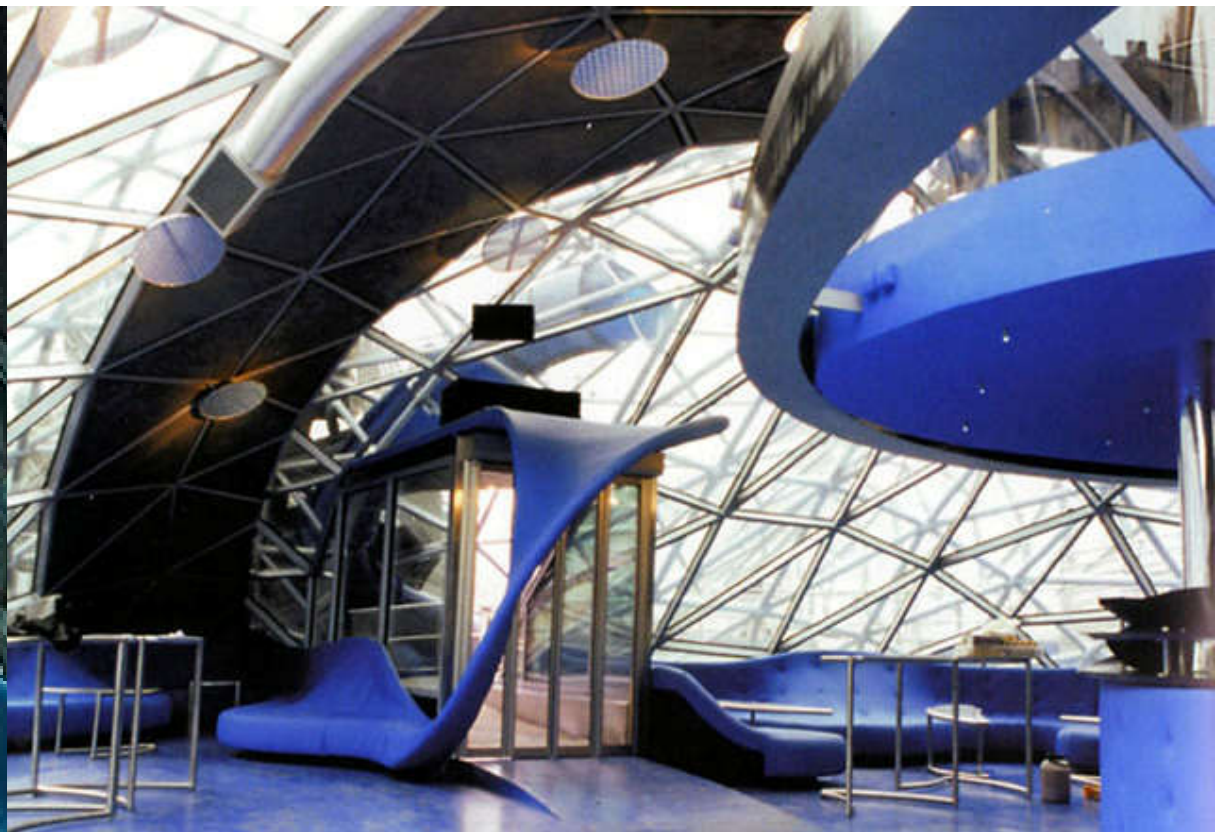

Vito Acconci's work in general concentrates on people, including seemingly uninvolved passers-by. His island for Graz must also be **seen in this context - an interplay of forms and elements, a play of communication in isolation.** The island is an exciting place, a lively and pleasurable experience, built for the new millennium for people to meet and communicate, to play or simply daydream and relax. And all this takes place by the water, on the water and in the water.

James C. Snyder:

**konsep adalah pemikiran
yang spesifik bertolak dari
hasil pemahaman**

**Serta penggabungan
beberapa unsur yang spesifik
yang langsung
berpengaruh pada desain.**

***gagasan-gagasan yang memadukan berbagai unsur ke dalam suatu
keseluruhan***

KONSEP DALAM ARSITEKTUR MEMPUNYAI MAKNA SEBAGAI BERIKUT:

KONSEP = ide abstrak, gambaran cara memenuhi program pembangunan yang didasarkan atas impresi + informasi yang dinyatakan secara grafis (sketsa ide)

KONSEP = strategi sesuatu untuk mewujudkan karya yang bertolak dari tuntutan dan kebutuhan.

KONSEP = persepsi tentang bentuk dari hasil analisa probela (dari analisa problema ke persepsi bentuk)

KONSEP cerminan yang mengandung sikap (attitude) dari perancang

Bagaimana menyusun sebuah
KONSEP

NO SMOKING

Simbol di atas adalah bentuk abstrak dari pesan larangan merokok.

Pesan ini dilahirkan dari
sebuah **KONSEP**

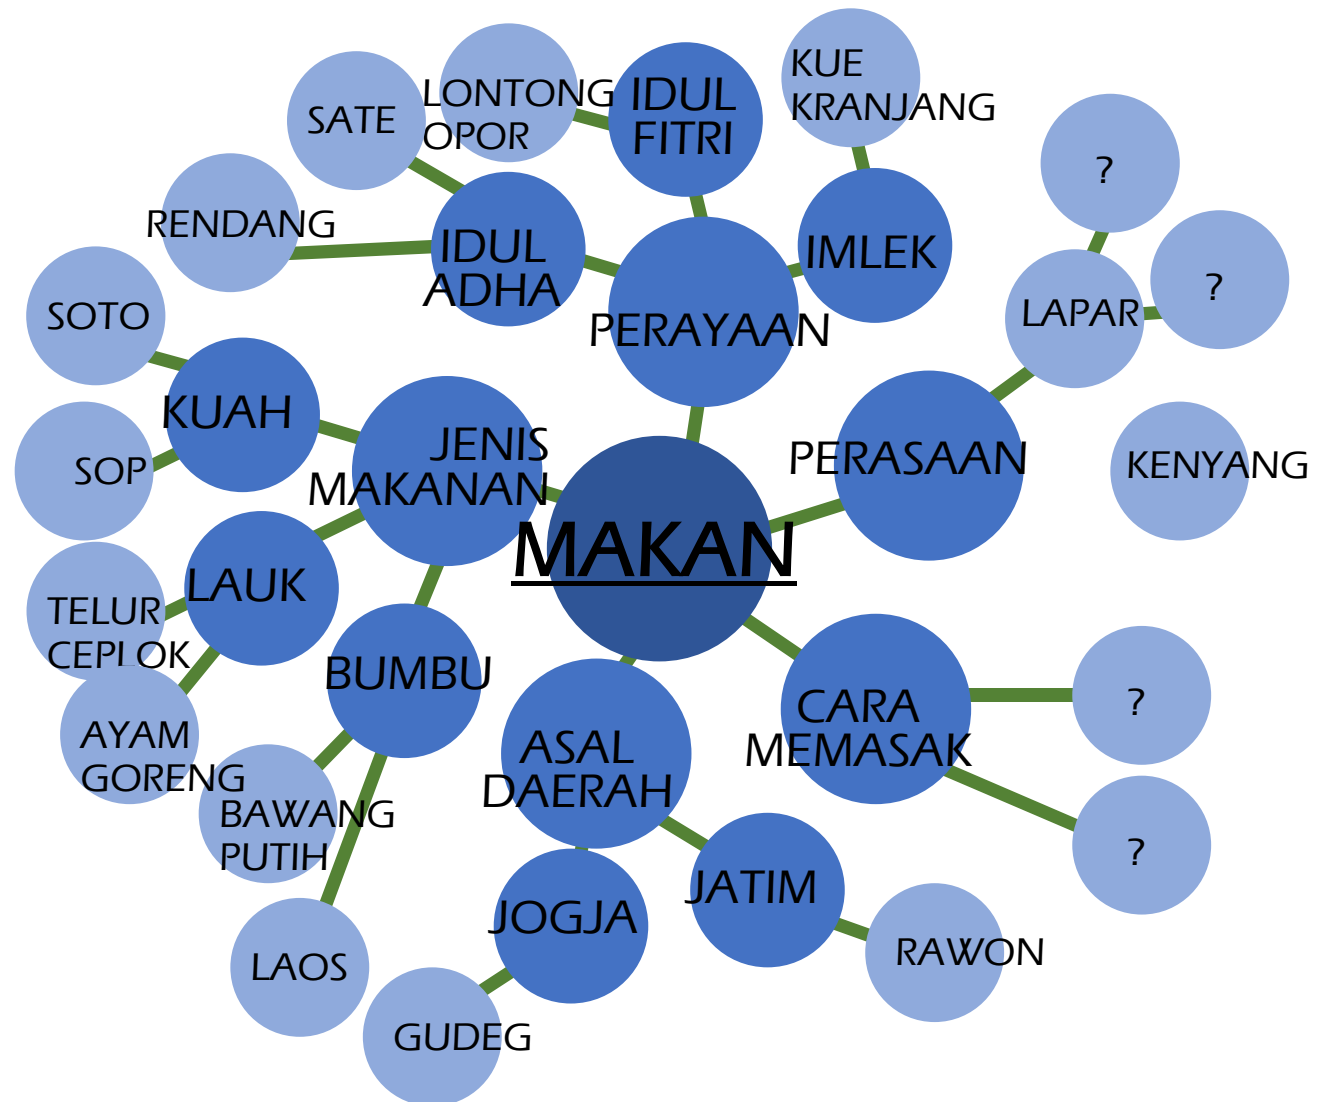

Bila tidak dapat membayangkan bagaimana cara menyampaikan proses pesan itu, akan berakibat hilangnya imajinasi terhadap bentuk visual yang akan diciptakan

Peta konsep

Mind Mapping

PENGALAMAN sangat berperan penting dalam menyusun konsep

konsep lahir dari pemikiran

pemikiran kita didasari oleh pengalaman dan pengetahuan

1. IDE/KONSEP

Konsep merupakan basic / dasar dari sebuah karya desain

1. IDE/KONSEP

2. **IMAJINASI**

Memutar otak, membayangkan visual dari segala macam hal yang berhubungan dengan konsep kita

1. IDE/KONSEP

2. IMAJINASI

3. **REFERENSI**

Riset mencari acuan atau pembandingan, mengambil contoh dan inspirasi dari berbagai macam elemen.

**“Copy from one is plagiarism,
copy from many is research”**

Wilson Mizner

1. IDE/KONSEP
2. IMAJINASI
3. REFERENSI
4. **SKILL**

Kemampuan teknis untuk mengolah konsep menjadi sebuah karya desain

A man with short blonde hair, wearing a dark suit jacket over a dark vest and a purple shirt, stands on the left side of the image. He is smiling and gesturing with his right hand towards the text boxes.

SEMUA KARYA DESAIN PASTI DAN HARUS
MEMILIKI KONSEP.

KONSEP ADALAH AWAL SEBUAH KARYA
YANG AKAN KITA HASILKAN.

TANPA KONSEP, KARYA MENJADI
BIASA DAN TIDAK BERARTI.

Jenis-jenis **KONSEP**

Jenis Konsep

1. Analogi (Analogies)

-> looking at Other Thing

2. Metafora and Similes (Metaphors and Similes)

-> looking at abstractions

3. Inti/ Insights (Essenses)

-> looking beyond programmatic needs

4. Respon Langsung dan Penyelesaian Permasalahan (Direct Responses and Problem Solving)

-> looking at the stated requirement

5. Ideals

-> looking at universal value

Snyder,
1979

6. Transformasi

-> shape changes step by step

7. Mimesis

-> imitation, the concept of borrowing

Antoniades,
1990

Jangan pernah puas

A person with dark hair, wearing a light-colored long-sleeved shirt, is sitting in a modern-style chair with a black metal frame and a light-colored cushion. They are looking at a laptop screen and have their feet resting on the chair's base. The background is a solid bright yellow. To the left of the person is a green speech bubble containing text. To the right are three diagonal banners with text in different colors.

The Dynamic Walk

ANIMATED FORM & HUMAN BODY

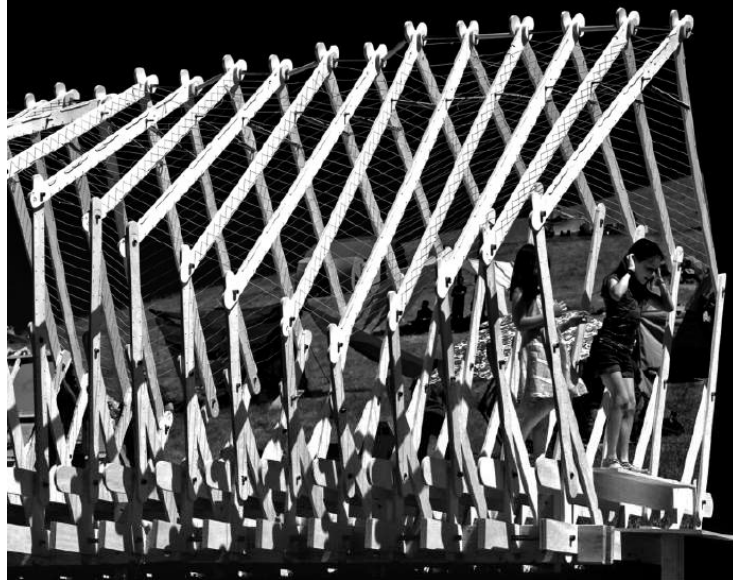

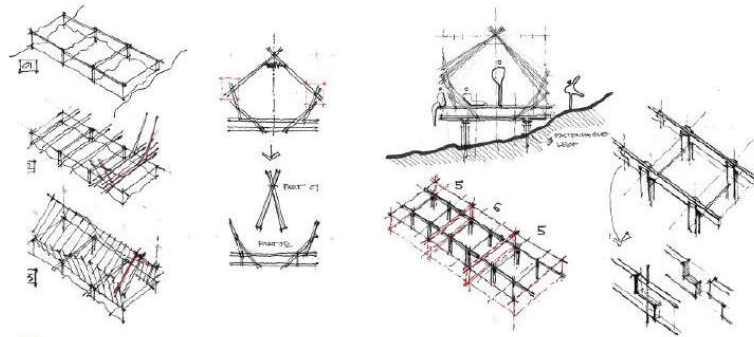

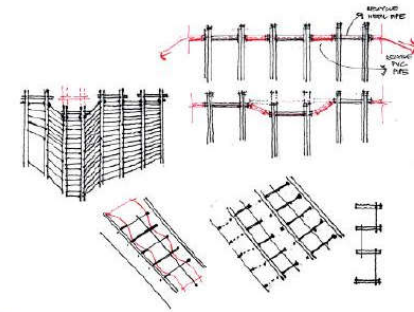

The world is moving in such fast pace that automation technology is quietly replacing human interactions. As a trade-off for industrial innovation, the bonding connection between human and machine is slowly weakened.

The Dynamic Walk project is a bridge to re-connect the relationship, strengthen the human influence in a structure design, and re-engage human motions to enable mechanical mechanism without any use of automation device.

3 BUILDINGS
The brief is converted into three rational building volumes

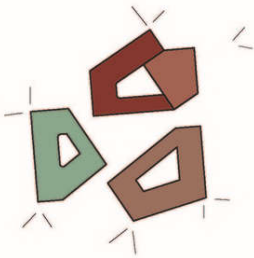

FACADE LINES
The volumes are rotated to adapt to the site and surroundings

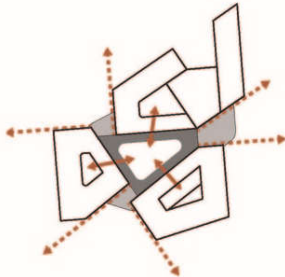

FLOWS & ARRIVAL
The volumes are shaped to create clear arrivals and connections

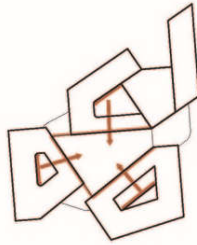

ATRIUM BUILDINGS
The volumes are hollowed out to create atriums and a connecting indoor plaza is added

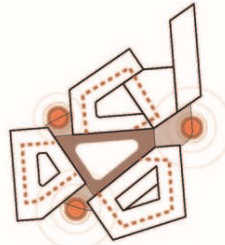

3 INSTITUTIONS
Each with an individual identity and professional environment

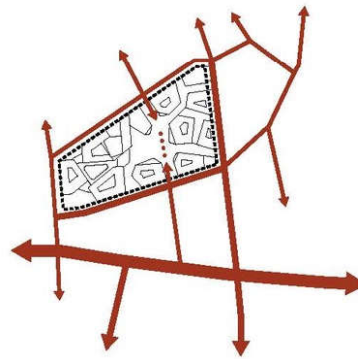

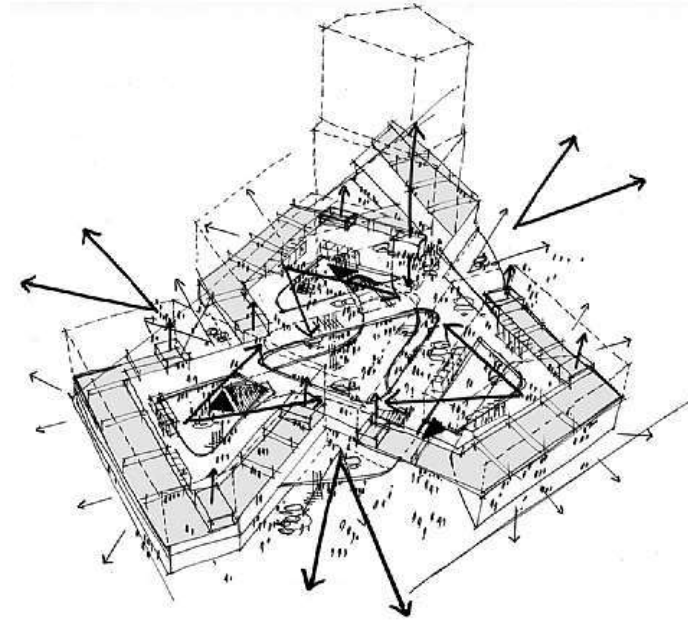

INSIDE-OUT
The campus buildings open up towards the city outside and the shared environment inside

SYNERGIES
All faculties are interconnected via the central covered indoor plaza

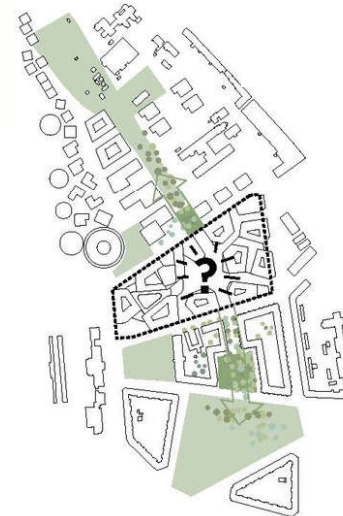

ZONES
Different urban spaces are created along the streets and where buildings meet the indoor plaza

Leftover packing material
for an object that has been
removed

"EXCISION, where that which is missing
receives greater attention"
"Minimalist Frame for a monumental void"
"A thing is a hole in a thing it is not"
"A residue"

ROBERT SOMOL

Accommodates all major functions
of media at national scale within a
single shape
Single Loop of interconnected
activities

Framing TVCC

CCTV Headquarters

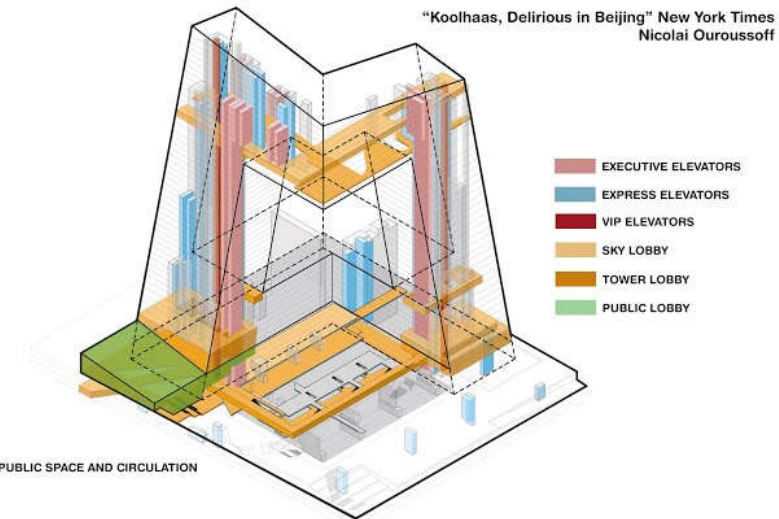

REM KOOLHAAS

Shape operates with "the seduction of contour," with the "calculated vagueness" of the surface area that sometimes rely on the presence and mere size of large-scale buildings. For Robert Somol, the work of Rem Koolhaas and oma, such as "the twisted knot" of the Central Chinese tvbuilding, operates with "the graphic immediacy of logos, generating a new identity" and thus seems to exemplify the specific qualities and potential of shape. 2cctvis a kind of cornered loop created by six approximately rectangular elements but with a deviation of a few grades. Its two main towers are interconnected at their basis by a common platform and joined at the top via a cantilevered L-shaped overhang. cctvrepresents a new species of an "exceptionally perceptive and adaptive organism," that accommodates all major functions of media at national scale within a single shape. Beside cctv, other projects such as the NeWhitney, the Seaterminal Zeebrugge, or the Dutch Embassy also use this strategy of a "cake-tin architecture" for accommodating all programmatic elements within a single shape. Like a distorted rhomboid that is hollowed out at its core, they appear like a residue, a "leftover packing material for an object that has been removed."

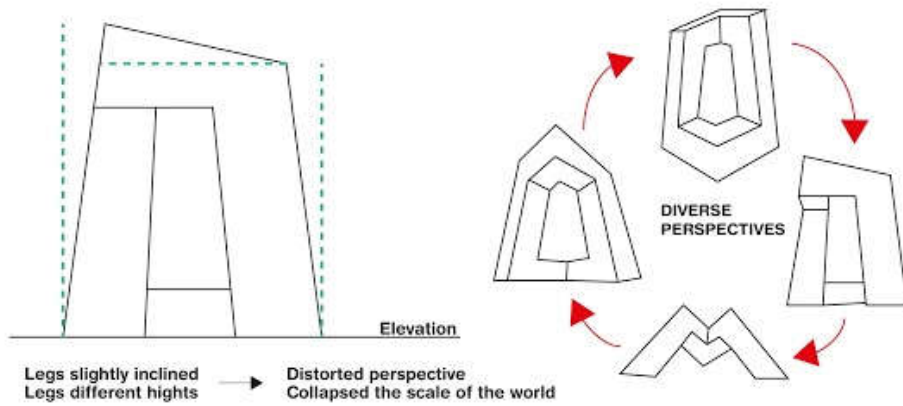

By characterizing it as a "minimalist frame for a monumental void," Somol paraphrases Carl Andre definition of the art object as "a thing is a hole in a thing it is not."

"IMAGINARY ARCHITECTURE AND SPACIAL IMMEDIACY"
INGRYD BOECK

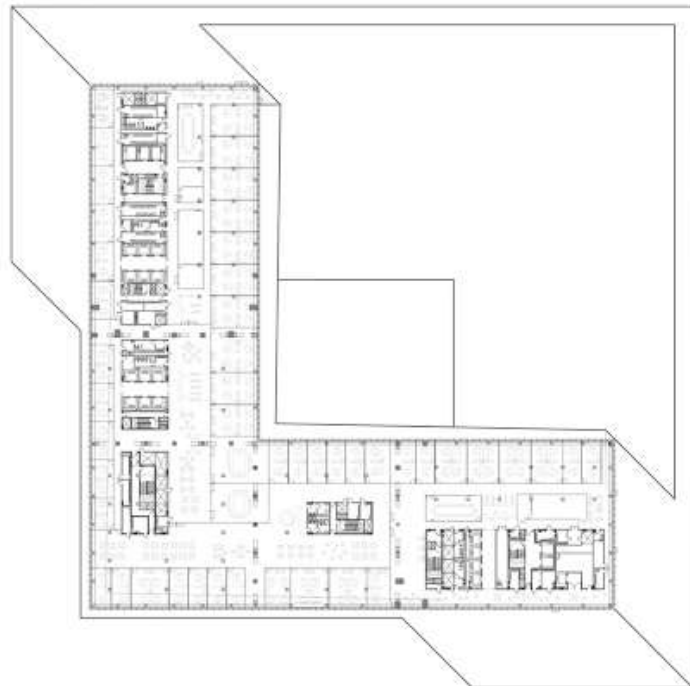

The legs, which taper as they rise to slightly different heights, distort your normal sense of perspective, and Mr. Koolhaas represses all the most obvious signs of human scale, like the repetitive windows and floor slabs of a conventional tower. From a distance it's virtually impossible to get a grip on the building's size — an apt metaphor for the way giant media companies like CCTV have collapsed the scale of our world.

FARMING KINDERGARTEN

Imagine the most productive facility approach, to maximize the farming facility. However, currently there have been many problems when close nature than led to nature and agriculture, such as flood, soil damage and drought. There are various other issues, but for pollution is a huge concern, with children coming right to the green quality air. Cities in Vietnam are also facing this problem. Consequently, there are no real playgrounds for children in the urban area becoming more and more. Against the backdrop of these issues, we propose **Farming Kindergarten**. A place to provide kids with an experience green community, but to learn about the importance of agriculture and landscaping with nature.

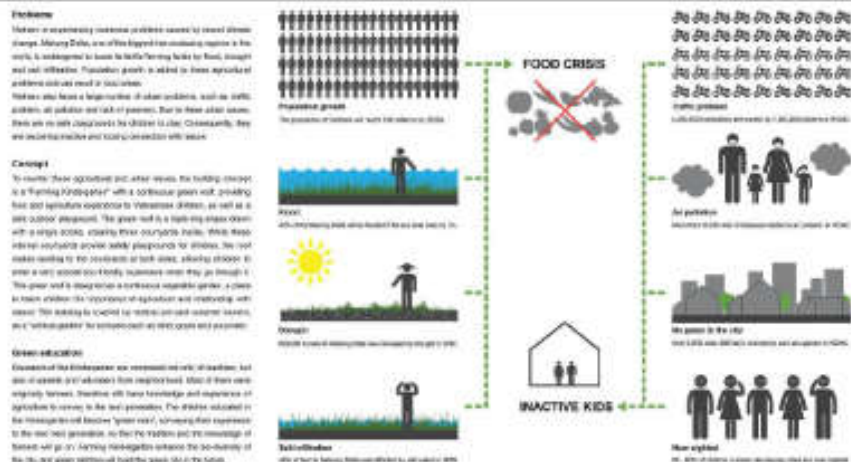

Vietnam

"A playful, exuberant building that integrates rooftop farming with a community kindergarten. This entry makes a couple of compelling arguments: of teaching the very young the importance of food production, and of creating new forms of public space in dense, polluted cities. Another lesson is that urban farming can be fun and life-affirming. The pretzel-shaped building connects the ground plane with rooftop farms in a manner that is gentle and seamless. The linear rooftop farm becomes a public promenade of sorts, teaching spaces below have easy access to daylight and natural ventilation." **Juror, Nirmal Kishnani**

[illegible][illegible]

Exposure of the kindergarten was composed of early childhood, but also of science (in education) from experience-based. Most of them were originally farmers. Therefore with their knowledge and experience of agriculture to convey to the next generation. The children educated in the kindergarten and likewise "green role", showing their expression to the next generation. In the 1970s and 1980s the kindergarten of the school was set up. During this period, the kindergarten of the school, the green movement had been active in the school.
